

Fall Arrest Raptor HSG-040

Product information

The RAPTOR fall arrester redefines the concept of safety since it has two fall indicators that are visible to users. These display the functionality of the device from the outside. A red indicator warns the user as soon as the device is due for inspection.

RAPTOR has a modular construction, which means that elements can be interchanged piece by piece. This makes audits easier and reduces maintenance costs. An energy-absorbing inlet damper protects the device housing and interior mechanisms against damage, as well as the user against injuries.

The rope-sparing guide pulley prevents additional wear.

The carefully thought-out housing design allows space-saving and device-protecting storage.

Rated load: 140 kg.

Material: AL, ST, Synthetic, Polyester

Marking: According to standard, CE-marked

Temperature range: -35°C up to +45°C

Standard: EN 360
