

Identification label for Petzl Ropes

Product information

The identification label can be used to replace old labels or establish a tracking system in order to more easily identify individual Petzl AXIS 11 mm, and PARALLEL 10.5 mm ropes. They can quickly be installed on the end of the rope without using a tool. Rigid, allowing for clear readability and longer-lasting markings.

Material: Nylon, Polycarbonate
Note: This label is not a travel-stop and does not replace the stopper knot to be tied at the end of the rope.
