

Pulley TWIN RELEASE, Petzl

Product information

Releasable double progress capture pulley for haul systems.

The TWIN RELEASE progress capture pulley is designed to set up 4:1 haul systems for work in confined spaces or for technical rescue. The brake integrated into the moving side plate and the main faceted sheave with single-direction rotation, offer additional braking and better control when lowering heavy loads. The two sheaves provide excellent hauling efficiency. The swivel facilitates operations, allowing the pulley to be oriented under load and direct connection of carabiners, ropes, or slings.

- Ergonomic handle for easy release of the cam
- Cam can be locked in the open position to easily feed slack
- Toothless cam helps preserve the rope and allows for easy transition from lowering to hauling and vice-versa
- Large-diameter sheave mounted on sealed ball bearings for excellent hauling efficiency
- Main faceted sheave with single-direction rotation provides excellent efficiency when hauling and adds friction zones with the rope for additional braking when lowering heavy loads
- Parallel-mounted sheaves and auxiliary attachment point for setting up various types of complex haul systems
- Triple-action opening of the moving side plates is quick and easy, even with gloves
- Red indicators provide a visual warning when the side plates are unlocked
- The rope can be installed with the device connected to the anchor
- Hole in the handle for installation of a remote control cord
- Swivel allows pulley to be oriented under load and accommodates up to three carabiners
- Swivel and auxiliary attachment point allows the use of ropes and slings for easier rigging

Material: Aluminium, Stainless Steel, Nylon

Marking: According to standard, CE-marked, UKCA-marked

Standard: EN 12278, EN 567
