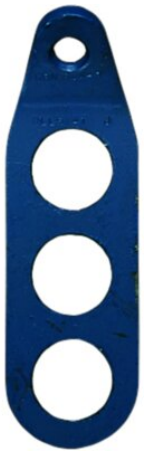
Container fittings

Product information



Container fittings with 1 and 3 holes are used to secure containers on trucks, ships, and other transport vehicles. Here is an explanation of the use of each type:

1-Hole Container Fittings

1-hole container fittings are simple fasteners used to secure containers by attaching them to a fixed surface. They have one hole for a bolt or another type of fastening mechanism. Their uses include:

- **Simple Securing:** Used when there is a need for a quick and easy securing of containers.
- **Temporary Anchor Points:** Ideal for temporary installations where containers need to be fastened and released quickly.

3-Hole Container Fittings

3-hole container fittings have three holes, providing maximum stability and security. Their uses include:

- **Maximum Securing:** Used when there is a need for maximum security and stability, such as during long-distance transport or in rough conditions.
- **Heavy Loads:** Ideal for securing heavy containers or cargo that requires extra support.

These fittings are essential components in the transportation industry, and the choice of type depends on specific needs for security and stability.
