

Line Systems AC360 with AT160

Product information

Fall arrester with rigid anchor line – System AC 360 is designed to provide protection for max. 2 users at the same time during their mobility in the vertical. The system can be installed on any type of fixed ladders onto structures such as chimneys, towers, masts or buildings. The essential element within the system is a guided type mechanism, installed on a steel cable of 8 mm in diameter, connected to a front attachment D-ring on full body harness. General elements within the system such as cable, guided type mechanism, cable connector, steel bolt clamps and tensioner are all made of stainless steel.

Complete ladder containing:

- Anchoring points AT 160
- Screw link connectors AZ 090
- Energy absorber AC 362
- Clamp and slide mechanism AC 363
- Line guide wire AC 922
- Line tensioner AC 910
- Steel rope with thimbles
- Marking plate

Material: Stainless steel

Marking: According to standard

Standard: EN 353-1
