Fireman's Safety Gloves, MED Approval

Product information

High-performance firefighting gloves designed for maritime use, certified according to EN 659 and MED (Marine Equipment Directive). Developed for professional shipboard fire teams, offering reliable thermal and mechanical protection with secure grip and dexterity in demanding conditions at sea.

Key Features

- Certified according to EN 659 (Firefighting gloves)
- MED-approved for use on seagoing vessels (Marine Equipment Directive)
- Designed for shipboard firefighting and emergency response
- High resistance to heat and flame
- Protection against mechanical risks in line with EN requirements (abrasion, cut, tear, puncture)
- Ergonomic multi-panel design for good dexterity and tool handling
- Long cuff design to overlap with firefighter jacket sleeves for extended protection
- Flame-retardant outer materials and lining (as per EN 659 requirements)
- Available in multiple sizes for optimal fit
- Suitable for use together with MED-approved fireman’s suit, boots, helmet, and balaclava

Typical Applications

- Firefighting on seagoing vessels (cargo, offshore, passenger ships)
- Shipboard emergency response teams
- Fire training on board or at shore-based marine training centers
- General hot work assistance during firefighting operations

Standards and approvals

EN 659: Protective gloves for firefighters
