Firemen's Balaclava, MED Approval

Product information

Flame-retardant firefighter balaclava designed for marine fire teams, certified to EN 13911 and suitable for MED-approved fireman's outfits. Provides additional thermal and flame protection to the head and neck when used together with a firefighter helmet and mask.

Key features

- Certified according to EN 13911 (Protective clothing for firefighters – Flame-retardant balaclavas)
- Suitable for MED-approved fireman's outfits for seagoing vessels
- Designed for use under a firefighter helmet and face mask
- Provides full head and neck coverage, with opening for eyes/face depending on model
- Made from flame-retardant, heat-resistant fabric (e.g. aramid/FR blend – to be specified from datasheet)
- Flat seams and ergonomic fit for comfort during extended wear
- Breathable material to help reduce heat stress
- Compatible with communication headsets/face masks used in maritime firefighting

Typical Applications

- Maritime firefighting on seagoing vessels (SOLAS/MED equipment)
- Shipboard emergency response teams
- Fire training exercises (shipboard and onshore)
- Additional protection during hot work firefighting scenarios

Standards and approvals

EN 13911: Flame-retardant balaclavas for firefighters
