Rescue NEST, Petzl

Product information

The nest can be used vertically, horizontally or at an angle to adapt to irregular or narrow terrain when transporting persons.
The nest is particularly well-suited for use in confined spaces, but also excellent for all technical rope rescue missions.

Easily manipulated:

- the litter has complete, integrated body harness for securing the person
- colour coding makes installation simple
- transverse attachment points are aligned to facilitate attachment of buckles
- FAST LT PLUS automatic buckles make it quick and easy to adjust. Lock system of the buckle reduces the risk of accidental unfastening
- easy to use flexible straps, even while wearing gloves.

Durability:

- reinforced handles with high-modulus polyethylene (HMPE), for better grip and durability
- smooth, rigid plastic bottom ensures good sliding
- reversible comfort foam for the back of the victim limits water absorption
- positioning foam at the thighs and feet adapts to all body types
- durable construction, thanks to the straps being integrated through their attachment points

Optional products:

- STEF tilting device allows the litter to be easily angled according to the terrain
- bag for storage and protection
- pack of four longitudinal stays, available as spare parts.
