Breathing Device M-20.2 EEBD, training model

Product information

The M-20.2T EEBD training model is designed for practising the correct donning procedure of the Ocenco M-20.2 Emergency Escape Breathing Device. It allows personnel to become familiar with the equipment without activating a single-use emergency escape unit. The training model supports practical preparation for emergency situations where rapid and correct equipment use is essential.

Product benefits:

- Dedicated training model enables practical familiarisation with EEBD donning procedures.
- Clearly marked training unit supports easy identification during exercises.
- Includes an additional mouthpiece assembly for training activities.
- Supplied with an instructional DVD and manual to support training.
